1 Isar-style Reasoning for Binary Tree Operations

theory *BinaryTree* **imports** *Main* **begin**

We prove correctness of operations on binary search tree implementing a set.

This document is LGPL.

Author: Viktor Kuncak, MIT CSAIL, November 2003

2 Tree Definition

datatype *'a Tree = Tip | T 'a Tree 'a 'a Tree*

primrec
  setOf :: *'a Tree => 'a set*
  — set abstraction of a tree
where
  setOf Tip = {}
| *setOf* (*T t1 x t2*) = (*setOf t1*) *Un* (*setOf t2*) *Un* {*x*}

type-synonym
  — we require index to have an irreflexive total order <
  — apart from that, we do not rely on index being int
  index = *int*

type-synonym — hash function type
  'a hash = *'a => index*

definition *eqs* :: *'a hash => 'a => 'a set* **where**
  — equivalence class of elements with the same hash code
  eqs h x == {*y*. *h y* = *h x*}

primrec
  sortedTree :: *'a hash => 'a Tree => bool*
  — check if a tree is sorted
where
  sortedTree h Tip = *True*
| *sortedTree h* (*T t1 x t2*) =
    (*sortedTree h t1* &
     (∀ *l* ∈ *setOf t1*. *h l* < *h x*) &
     (∀ *r* ∈ *setOf t2*. *h x* < *h r*) &
     sortedTree h t2)

lemma *sortLemmaL*:
  sortedTree h (*T t1 x t2*) ==> *sortedTree h t1* **by** *simp*
lemma *sortLemmaR*:
  sortedTree h (*T t1 x t2*) ==> *sortedTree h t2* **by** *simp*

3 Tree Lookup

primrec
tlookup :: *'a hash => index => 'a Tree => 'a option*
where
tlookup h k Tip = None
| *tlookup h k (T t1 x t2) =*
(if k < h x then tlookup h k t1
else if h x < k then tlookup h k t2
else Some x)

lemma *tlookup-none*:
sortedTree h t & (tlookup h k t = None) −−> (∀ x∈setOf t. h x ~= k)
by (*induct t*, *auto*)

lemma *tlookup-some*:
sortedTree h t & (tlookup h k t = Some x) −−> x:setOf t & h x = k
apply (*induct t*)
— Just auto will do it, but very slowly
apply (*simp*)
apply (*clarify*, *auto*)
apply (*simp-all split*: *if-split-asm*)
done

definition *sorted-distinct-pred* :: *'a hash => 'a => 'a => 'a Tree => bool* **where**
— No two elements have the same hash code
sorted-distinct-pred h a b t == sortedTree h t &
a:setOf t & b:setOf t & h a = h b −−>
a = b

declare *sorted-distinct-pred-def* [*simp*]

— for case analysis on three cases
lemma *cases3*: [| *C1 ==> G*; *C2 ==> G*; *C3 ==> G*;
C1 | C2 | C3 |] ==> G
by *auto*

4 Insertion into a Tree

```
primrec
  binsert :: 'a hash => 'a => 'a Tree => 'a Tree
where
  binsert h e Tip = (T Tip e Tip)
| binsert h e (T t1 x t2) = (if h e < h x then
                              (T (binsert h e t1) x t2)
                             else
                              (if h x < h e then
```

```
                (T t1 x (binsert h e t2))
               else (T t1 e t2)))
```

A technique for proving disjointness of sets.

```
lemma disjCond: [| !! x. [| x:A; x:B |] ==> False |] ==> A Int B = {}
by fastforce
```

The following is a proof that insertion correctly implements the set interface. Compared to *BinaryTree-TacticStyle*, the claim is more difficult, and this time we need to assume as a hypothesis that the tree is sorted.

```
lemma binsert-set: sortedTree h t -->

6 Mostly Isar-style Reasoning for Binary Tree Operations

theory *BinaryTree-Map* **imports** *BinaryTree* **begin**

We prove correctness of map operations implemented using binary search trees from BinaryTree.

This document is LGPL.

Author: Viktor Kuncak, MIT CSAIL, November 2003

12 Tactic-Style Reasoning for Binary Tree Operations

theory *BinaryTree-TacticStyle* **imports** *Main* **begin**

This example theory illustrates automated proofs of correctness for binary tree operations using tactic-style reasoning. The current proofs for remove operation are by Tobias Nipkow, some modifications and the remaining tree operations are by Viktor Kuncak.

13 Definition of a sorted binary tree

datatype *tree* = *Tip* | *Nd tree nat tree*

primrec *set-of* :: *tree* => *nat set*
— The set of nodes stored in a tree.
where
set-of Tip = {}
| *set-of*(*Nd l x r*) = *set-of l Un set-of r Un* {*x*}

primrec *sorted* :: *tree* => *bool*
— Tree is sorted
where
sorted Tip = *True*
| *sorted*(*Nd l y r*) =
(*sorted l* & *sorted r* & (∀ *x* ∈ *set-of l*. *x* < *y*) & (∀ *z* ∈ *set-of r*. *y* < *z*))

14 Tree Membership

primrec
memb :: *nat* => *tree* => *bool*
where
memb e Tip = *False*
| *memb e* (*Nd t1 x t2*) =
(*if e* < *x then memb e t1*

```
  else if x < e then memb e t2
  else True)

lemma member-set: sorted t --> memb e t = (e : set-of t)
by (induct t) auto
```

15 Insertion operation

```
primrec binsert :: nat => tree => tree
— Insert a node into sorted tree.
where
  binsert x Tip = (Nd Tip x Tip)
| binsert x (Nd t1 y t2) = (if x < y then
                              (Nd (binsert x t1) y t2)
                            else
                              (if y < x then
                                (Nd t1 y (binsert x t2))
                               else (Nd t1 y t2)))

theorem set-of-binsert [simp]: set-of (binsert x t) = set-of t Un {x}
by (induct t) auto

theorem binsert-sorted: sorted t --> sorted (binsert x t)
by (induct t) (auto simp add: set-of-binsert)

corollary binsert-spec:
sorted t ==>
   sorted (binsert x t) &
   set-of (binsert x t) = set-of t Un {x}
by (simp add: binsert-sorted)
```

16 Remove operation

```
primrec
  rm :: tree => nat — find the rightmost element in the tree
where
  rm(Nd l x r) = (if r = Tip then x else rm r)
primrec
  rem :: tree => tree — find the tree without the rightmost element
where
  rem(Nd l x r) = (if r=Tip then l else Nd l x (rem r))

primrec
  remove:: nat => tree => tree — remove a node from sorted tree
where
  remove x Tip = Tip
| remove x (Nd l y r) =
    (if x < y then Nd (remove x l) y r else
```

```
  if y < x then Nd l y (remove x r) else
  if l = Tip then r
  else Nd (rem l) (rm l) r)

lemma rm-in-set-of: t ~= Tip ==> rm t : set-of t
by (induct t) auto

lemma set-of-rem: t ~= Tip ==> set-of t = set-of(rem t) Un {rm t}
by (induct t) auto

lemma [simp]: [| t ~= Tip; sorted t |] ==> sorted(rem t)
by (induct t) (auto simp add:set-of-rem)

lemma sorted-rem: [| t ~= Tip; x ∈ set-of(rem t); sorted t |] ==> x < rm t
by (induct t) (auto simp add:set-of-rem split:if-splits)

theorem set-of-remove [simp]: sorted t ==> set-of(remove x t) = set-of t - {x}
apply(induct t)
 apply simp
apply simp
apply(rule conjI)
 apply fastforce
apply(rule impI)
apply(rule conjI)
 apply fastforce
apply(fastforce simp:set-of-rem)
done

theorem remove-sorted: sorted t ==> sorted(remove x t)
by (induct t) (auto intro: less-trans rm-in-set-of sorted-rem)

corollary remove-spec: — summary specification of remove
sorted t ==>
   sorted (remove x t) &
   set-of (remove x t) = set-of t - {x}
by (simp add: remove-sorted)
```

Finally, note that rem and rm can be computed using a single tree traversal given by remrm.

```
primrec remrm :: tree => tree * nat
where
remrm(Nd l x r) = (if r=Tip then (l,x) else
                   let (r',y) = remrm r in (Nd l x r',y))

lemma t ~= Tip ==> remrm t = (rem t, rm t)
by (induct t) (auto simp:Let-def)
```

We can test this implementation by generating code.

```
definition test = memb 4 (remove (3::nat) (binsert 4 (binsert 3 Tip)))
```

export-code *test*
 in *SML* **module-name** *BinaryTree-TacticStyle-Code* **file** ‹*BinaryTree-TacticStyle-Code.ML*›

end
